The beauty of Our State being an attraction for the domestic and the tourists abroad demands for a more efficient Transport system - purely safe, dependant, environment friendly and accident free. The increasing number of widows, orphans, disabled or childless parents as a result of increasing number of road accidents causing loss of precious human lives or leaving many disabled and injured is a matter of great concern for all of us. It is still not too late to rise to an occasion to leave no stone unturned to make this place a real paradise on the earth where there are no traffic crashes as a result of our negligence, rash and un-authorized driving. Let's learn to be cool and to respect each other on the road and let the road safety be our motive. Let's not cause danger, obstruction or undue inconvenience to other road users. . If we are not so good to save anybody's life, why to be so bad to kill any one on the road? Therefore, let's avoid Overloading, over speeding, rash and negligent driving. when we are not physically and mentally fit or when our vehicle is not mechanically fit we are sure to kill or get killed on the road. Road safety depends upon awareness and therefore let's learn with a great cause and teach others with love and affection all the safety tips we know.

Let's be an example for others on the road. The manner we drive and the way we behave on the road be an open book for all others to read.

(G.A. Sofi)
